

StoPox WL 100

Water-based floor sealant for interiors

The multifunctional floor coatings

Floor coatings for industrial applications require the right properties to meet the specific demands of industry. The floor slab carries the static and dynamic loads of the building structure which in turn needs to be protected from chemical and mechanical stresses. Reactive surface protection systems are ideal for this purpose.

StoPox WL 100

Water-based floor coatings for interiors

Whether its for use in the automotive industry or in the electronics industry, specifications for flooring are defined by the particular stresses placed on the floor. The typical considerations are:

- Type of stress (chemical/mechanical/thermal)
- Stress frequency
- Weight of vehicular traffic
- Concentration of chemical contamination

StoPox WL 100 is the all-rounder among the StoCretec floor coating materials for low to medium stress applications. StoPox WL 100 covers the vast majority of applications from warehousing to automotive workshops. Furthermore StoPox WL 100 is a water borne epoxy resin coating with all the advantages that water based technology offers:

- Very simple to apply
- Free of organic solvents
- Odourless
- Free of benzyl alcohol and nonyl phenol (plasticisers)
- Water vapour permeable

In developing StoPox WL 100, particular emphasis was placed on simple application. As a result, it is considerably more straightforward to use than classic reaction resins. Cleaning the tools with water is a less complicated and swifter process than solvent based products. Applying StoPox WL 100 with an airless spray gun brings the additional benefits of economy and time saving.

In contrast to solvent based coatings, StoPox WL 100 is odourless, a significant benefit to the applicator when working indoors.

StoPox WL 100 from StoCretec – the market leader in water-based floor coatings – is a product range which has been tried and tested over decades, offering a well-balanced portfolio of water-based floor products from the all-rounder to specialist variants.

Our Building with conscience motto also extends to according due consideration to the applicator's health. StoPox WL 100 is physiologically harmless and has received official approval from the TÜV Technical Control Board as a "low-emission and nonyl phenol-free" product. It is the only product of its type to bear this seal of approval at present.
